

138_llama_cpp

The test of llama.cpp

Create the project

On the Forgejo Server

- sign in with
- stephen
-

password Forgejo2026\$\$

Create a blank repository

https://dev.oxnee.com./stephen/138_llama_cpp

clone development machine

In a Mac terminal create the blank project

A screenshot of a macOS terminal window titled "01_Projects -- zsh -- 126x24". The terminal shows the following text: "Last login: Fri Jun 5 19:55:37 on ttys000", "stephenlohning@Scotty 01_Projects % git clone https://dev.oxnee.com./stephen/138_llama_cpp.git", "Cloning into '138_llama_cpp'...", "warning: You appear to have cloned an empty repository.", and "stephenlohning@Scotty 01_Projects %".

```
01_Projects -- zsh -- 126x24
Last login: Fri Jun 5 19:55:37 on ttys000
stephenlohning@Scotty 01_Projects % git clone https://dev.oxnee.com./stephen/138_llama_cpp.git
Cloning into '138_llama_cpp'...
warning: You appear to have cloned an empty repository.
stephenlohning@Scotty 01_Projects %
```

Now we have a blank repository

```
stephenlohning@Scotty 138_llama_cpp % tree -a
.
├── .git
│   ├── HEAD
│   ├── config
│   ├── description
│   ├── hooks
│   └── applypatch-msg.sample
```

```
├── commit-msg.sample
├── fsmonitor-watchman.sample
├── post-update.sample
├── pre-applypatch.sample
├── pre-commit.sample
├── pre-merge-commit.sample
├── pre-push.sample
├── pre-rebase.sample
├── pre-receive.sample
├── prepare-commit-msg.sample
├── push-to-checkout.sample
├── sendemail-validate.sample
├── update.sample
├── info
│   └── exclude
├── objects
│   ├── info
│   └── pack
├── refs
│   ├── heads
│   └── tags
└── doc
    ├── Notes.md
    └── images
        └── image01.png
```

It has only a local git repository

```
stephenlohning@Scotty 138_llama_cpp % ls -la
total 0
drwxr-xr-x@  3 stephenlohning  staff   96 Jun  5 20:21 .
drwxr-xr-x@ 158 stephenlohning  staff 5056 Jun  5 20:21 ..
drwxr-xr-x   9 stephenlohning  staff  288 Jun  5 20:21 .git
stephenlohning@Scotty 138_llama_cpp % git remote -v
origin  https://dev.oxnee.com./stephen/138_llama_cpp.git (fetch)
origin  https://dev.oxnee.com./stephen/138_llama_cpp.git (push)
```

I usually create a folder call doc and a folder below that for images

Initial .gitignore

```
./.git
.DS_Store
```

commit back to Forgejo server

It shows 4 file commit them all
